Östgöta companies in charged cooperation

Norrköping-based Chargestorm is one of the leaders in e-Mobility. Now, in their introduction of a new product, they are utilising the expertise of another Östgöta company, the electrical systems specialist Rimaster. The EVA Wallbox charging station is to be produced at Rimaster Electrosystem in Rimforsa.

Chargestorm is a pioneer insofar as e-Mobility is concerned and the market leader in system solutions and charging structures for electric vehicles. Chargestorm technology can be found in most of the charging stations on the market today and the company's operating systems are being used by Norway's largest operators. Chargestorm has also recently signed an agreement with a global dealer to car-parking companies.

Rimaster will manufacture EVA Wallbox, which is Chargestorm's new charging station for homes, condominiums and businesses. EVA Wallbox is based on an intelligent system that can be connected to the Internet, EVA Connected, for monitoring and remote control. Production is taking place in Rimforsa and Rimaster has overall responsibility for manufacturing, function tests and just in time deliveries.

"Rimaster has extensive competence in the field of electric cabinetry and is a master at dealing with the whole system. And this makes it possible to achieve a rapid startup. Rimaster's system offering of competence in development of electrical and electronic systems is also a security for the future," says Chargestorm CEO, Patrik Lindergren.

The collaborative venture is an expression of Rimaster's strategy of working with new and sustainable technology.

"This is an interesting product area that we believe will grow a lot in the future," says Andreas Kronström, Key Account Manager at Rimaster.

"All kinds of smart and efficient system solutions for a more sustainable society are of great interest to us and we think it's really great to be going along with Chargestorm on this journey. We are two knowledge-intensive companies with matching ambitions and who can be developing alongside each other."

About Rimaster

Rimaster is a partner in the development and manufacturing of electrical wiring and cabinets, electronics and cabins for special vehicles. The customers are predominantly found among world-leading product owners in their respective industries such as special vehicles for material handling, mining, forestry and agriculture and in industrial automation.

Media Information

Rimaster is a global company with origins and head office in Rimforsa, some 230 km south-west of Stockholm, Sweden. The Rimaster group has units for sales, design, development and manufacturing in Rimforsa, Söderhamn and Horn in Sweden, Czaplinek and Borne Sulinowo in Poland as well as in Ningbo, south of Shanghai, in China. Sales offices are also located in Belgium, France and Germany.
